

Duracrete In-house Batching Plant
(Commissioned March 2011).

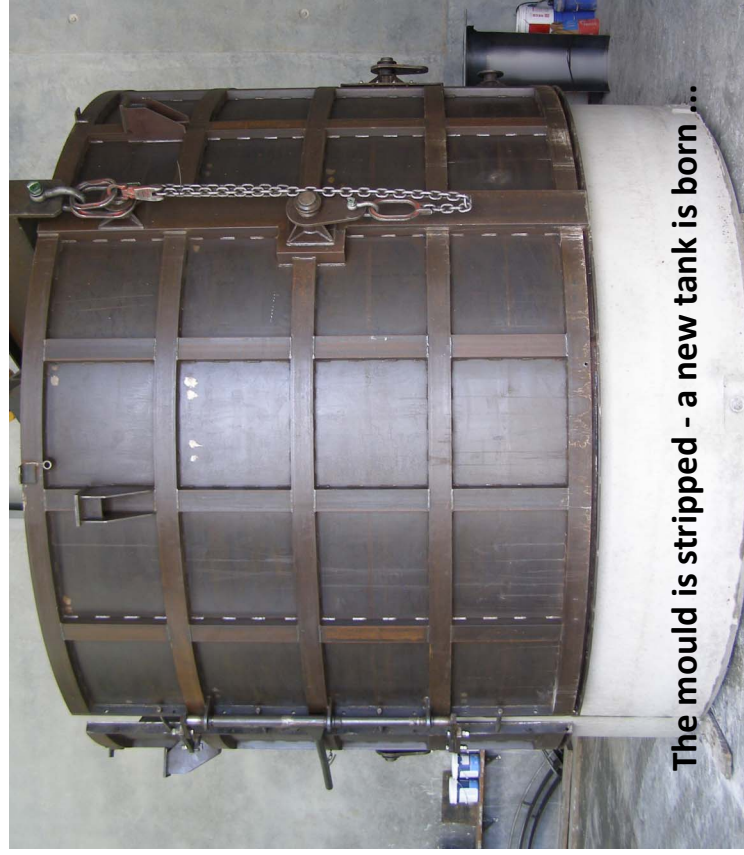

Self Compacting Concrete (SCC) is mixed and ready to pour.

SCC is poured into the inverted tank mould.

The mould is turned over the following day.

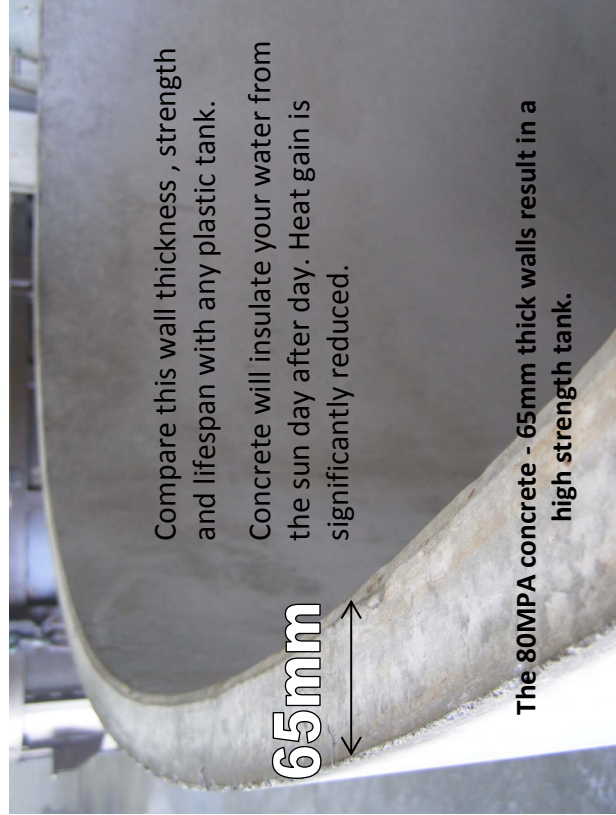

The mould is stripped - a new tank is born...

The roof is sealed to the tank

The finished tank is wheeled out.

Compare this wall thickness, strength and lifespan with any plastic tank.
Concrete will insulate your water from the sun day after day. Heat gain is significantly reduced.

65mm

The 80MPa concrete - 65mm thick walls result in a high strength tank.

Duracrete tanks are ready for delivery
