These images show how simple the installation process is for CleanStream Sewage Systems.

Additional Benefits for Drainage Contractors

- The CleanStream System is designed as a Plug N Play unit - to help make the drain layer's job easy and quicker.
- The system has 670mm of fall as part of it's design.
- There are no connections and weak spots with this 1 tank system (unlike using a 2 tank system)
- The tank is made from 80mpa precast concrete reinforced with galvanised steel fibres.
- Replacing the textile media is a straight forward process - no disruption for established paths, gardens and lawns.
