

WATER TANK ACCESSORIES

Delivered with simple electrical
& plumbing connections.

Benefits of Installed Submersible Hush Pumps

- The pump is out of sight and out of mind = A potential deterrent to theft.
- The pump performs better at the bottom of the tank than traditional pump set ups = Optimum Hydraulic Performance.
- The Hush Pump is submerged in water and is silent = Peace and quiet for the occupants.
- The pump is fitted with a floating intake = Fresh water supplied from the top of the tank where it is most aerated and oxygenated.
- A pre installed pump takes away the need to involve another contractor (usually the plumber) and eliminates potential future disagreements if any issues arise = Labour savings and efficiency.
- No need for a traditional pump house and concrete slab floor for the pump = Tidy setup and savings.
- The piping and electrical connections are all in one place - this means it is easy to connect in readiness for start up = Efficiency and tidy setup.
- The tank is supplied with an outdoor electrical switch to the tank wall. This results in a "Plug and Play" system = Every aspect is covered.
- There is an immediate water supply for the onsite contractors during the building process = Happy and contented workers and an efficient *build*.
